Festival ‘taking care together’

Dossier of intent: we are building this project in an agile way, integrating feedback from the community over the weeks. We also want to establish this dialogue with you to refine the proposal according to your expectations and experiences.

First edition 2020

Concept for 2022

2019. Following the health game jams organised by [Breathing Games](#) (19:30, [A new Economy](#)), the [Geneva Health Forum](#) and [Open Geneva](#) invite our association to design and organise a citizen event of open innovation in health.

2020. The [GHF Open Village](#) opened, offering 20 participatory activities on health commons. The summary [poster](#), distributed in nine languages, was seen 2200 times. Today, we propose a revisited edition of the Village.

HEALTH TECHNOLOGY AS COMMONS: TRUSTABLE, AFFORDABLE, ADAPTABLE

Geneva Health Forum 2020 · Open Village · www.openvillage.ch

6 in 10 humans still have no access to care, or do not adhere to it, despite rising investments.¹⁻³ Alcohol-based hand rub⁴ and WikiMed⁵ illustrate how creating freely reproducible equipment and software with communities can: save millions of lives, increase integrity, cut costs by 90%. Cooperation-driven care is the only way to realize the 2030 agenda in time: health for everyone.⁶ We present nine alternatives to the dominant proprietary excluding innovation model, to drive development towards a responsible, solidar society.

Hand prosthesis to ease one's daily life

A prosthetic hand usually costs 6-10 K€. Enable brings together over 30000 volunteers who design and distribute 3D-printed prostheses to vulnerable people. www.enablingthefuture.org + www.gre-nable.fr + www.enablenepal.org

Drugs produced with integrity

India has a pioneer approach in pharmaceuticals. Open Source Drug Discovery brings together 7900 people who collectively develop open-source, low-cost therapies for neglected diseases such as tuberculosis, malaria, leishmaniasis. www.osdd.net

Open-sourcing MRI could save the German healthcare over 200 M€ yearly⁷

Medical imaging is crucial in diagnosing, understanding and treating a number of diseases. The Open Source Imaging initiative gathers experts to create MRI scanners that can be built and maintained for a fraction of the cost of current MRIs. www.opensourceimaging.org

Ultrasound scanner in the pocket

One in three persons have access to medical imaging. A portable ultrasound device usually costs 8-22 K€. EchOpen develops a probe to visualise organs on a smartphone. It helps guide the diagnosis and make patient management more fluid. www.echopen.org

Detecting seizures with wearables

50 million people have epilepsy, 1/3 are drug resistant. Epileptic seizures lead to daily stress and social exclusion. We develop wearables and software to log and analyse biological data. www.aura.healthcare + www.openhumans.org + www.cri-paris.org

Making air pollution a visible matter

In Switzerland, one in seven premature deaths is linked to air pollution. LogAir helps everyone to map the air quality (fine particles) using cheap devices. Generating data can help avoid bad air quality, but can also motivate policy changes for healthier cities. www.logair.io

Collecting and visualizing data

MindLogger makes it easy for anyone to collect, analyze, and visualize data using mobile devices. Users are able to build their own activities, such as surveys, quizzes, digital diaries, or cognitive tasks. www.mindlogger.org

Transforming gesture into sound

Fuga explores the potential of emerging technologies for preventing, diagnosing, monitoring, and rehabilitating mental health disorders in line with recent advances in psychiatry and neuroscience. www.hoosh.space/fuga

Taking care of our breathing through play

Worldwide, one child in ten has asthma, one senior in twenty has COPD, a disease caused by pollution and smoking. Breathing Games is developing a multiplayer game and a breath sensor to promote respiratory health. www.breathinggames.net

We also discuss ageing, public policies, quality systems, and cryptocurrencies.

Current issues

After two years of restraint, "the population as a whole is showing signs of fatigue; the passive endurance mode in the face of the crisis has sapped strength" ([Federal Office of Public Health 2021](#)). Mental health problems are on the rise, especially among the most vulnerable ([KOF 2021](#), [Swiss Re 2020](#)), and Swiss democracy is in decline ([EIU 2021](#), [Freedom House 2020](#)).

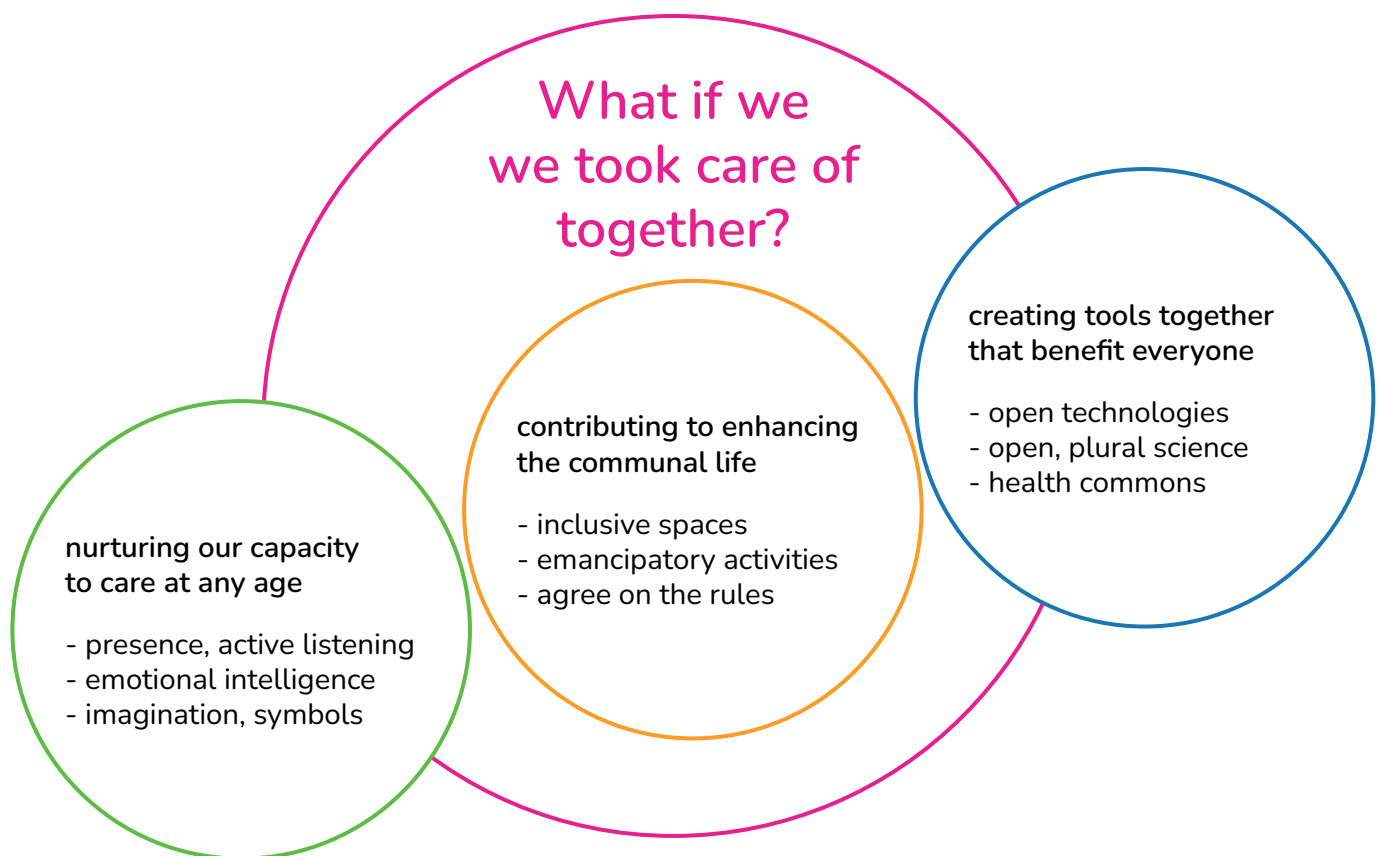

But while our health declines when measures are imposed on us, it improves when we are the protagonists of our lives ([Ng et al '12](#)).

Our vision

A festival co-created with and for the Romans, to heal the wounds resulting from the crisis.

A festival that values collective intelligence, creativity, subjectivity, and strengthens citizens' capacities for self-determination and shared governance. Balm to the heart to create together a future we no longer dream of.

A citizen festival in addition to and near the Geneva Health Forum, from 3 to 5 May 2022, with an international reach.

Logo

The festival logo represents a plural circle of people gathered around a fire, the emergence of a common project, the appeased snake of Aesculapius' staff that returns to the heart of the four elements or, more symbolically, the fertilisation source of life.

Organisers

A project led by the [Breathing Games Association](#) under the patronage of the [Geneva Health Forum](#) and the [Open Geneva](#) association.

The Geneva Health Forum 2022 will focus on global and environmental health. The [Mekong Delta](#) will be the guest of honour.

With this in mind, we imagine a festival that celebrates social connection and nature. Here are some of our inspirations.

rooted,
embodied

The heart of the festival is to reconnect and nurture the connection to nature. We are therefore planning a [Mamajah](#) tent near the CIG (IUC park or Place des Nations garden), including activities by the local Vietnamese (Mekong) community.

festive,
creative

After two years of constraints, we want to celebrate the joy of living, and heal damaged relationships, like the [Indian festival Holi](#). We will promote creativity and art therapy, in collaboration with the [Art hives](#), a community art network.

communal,
scalable

To invite citizens to reclaim common spaces, we will encourage the emergence of ephemeral spaces for listening and sharing gestures of kindness, such as the sanctuary presented in the film [The Square](#), or the [Life Vest Inside](#) movement.

plural,
documented

Annex: Project assessment					
	0 - Minimum	1	2	3	4 - Maximum
Health (see Greenhalls)	not acting, not supported (isolated)	coping with illness (disease management)	whole-system approach (prevention, promotion)	critical public health (political action)	holistic, lifelong wellbeing
Contributors	experts alone	users consulted in end product	users give inputs in certain stages	users participate on full life cycle	users adopt initiative for other aims (working)
Process, standards, documents, software, ...	closed not shared	closed and shared	partly open and shared	fully open and shared	fully libre, contributing to other libre projects
Licenses including for the core	patent, copyright	patent with free reuse	public domain (ex. CC 0)	non-commercial licence (ex. CC BY-NC)	Reciprocity (ex. Peer Production lic.)
Resource allocation (see Benker)	extractive	for-profit company	social enterprise, cooperative	open access commons with value accounting	fewest projects possible, as much as needed
Physical availability	not produced	centralized	decentralized	distributed, industries (mass production)	distributed, communities (crowd production)
Impact validation (see Guba and Lincoln)	not available	tested with users	postivist, quantitative studies	naturalistic, mixed methods, one setting	naturalistic, mixed methods, multi settings

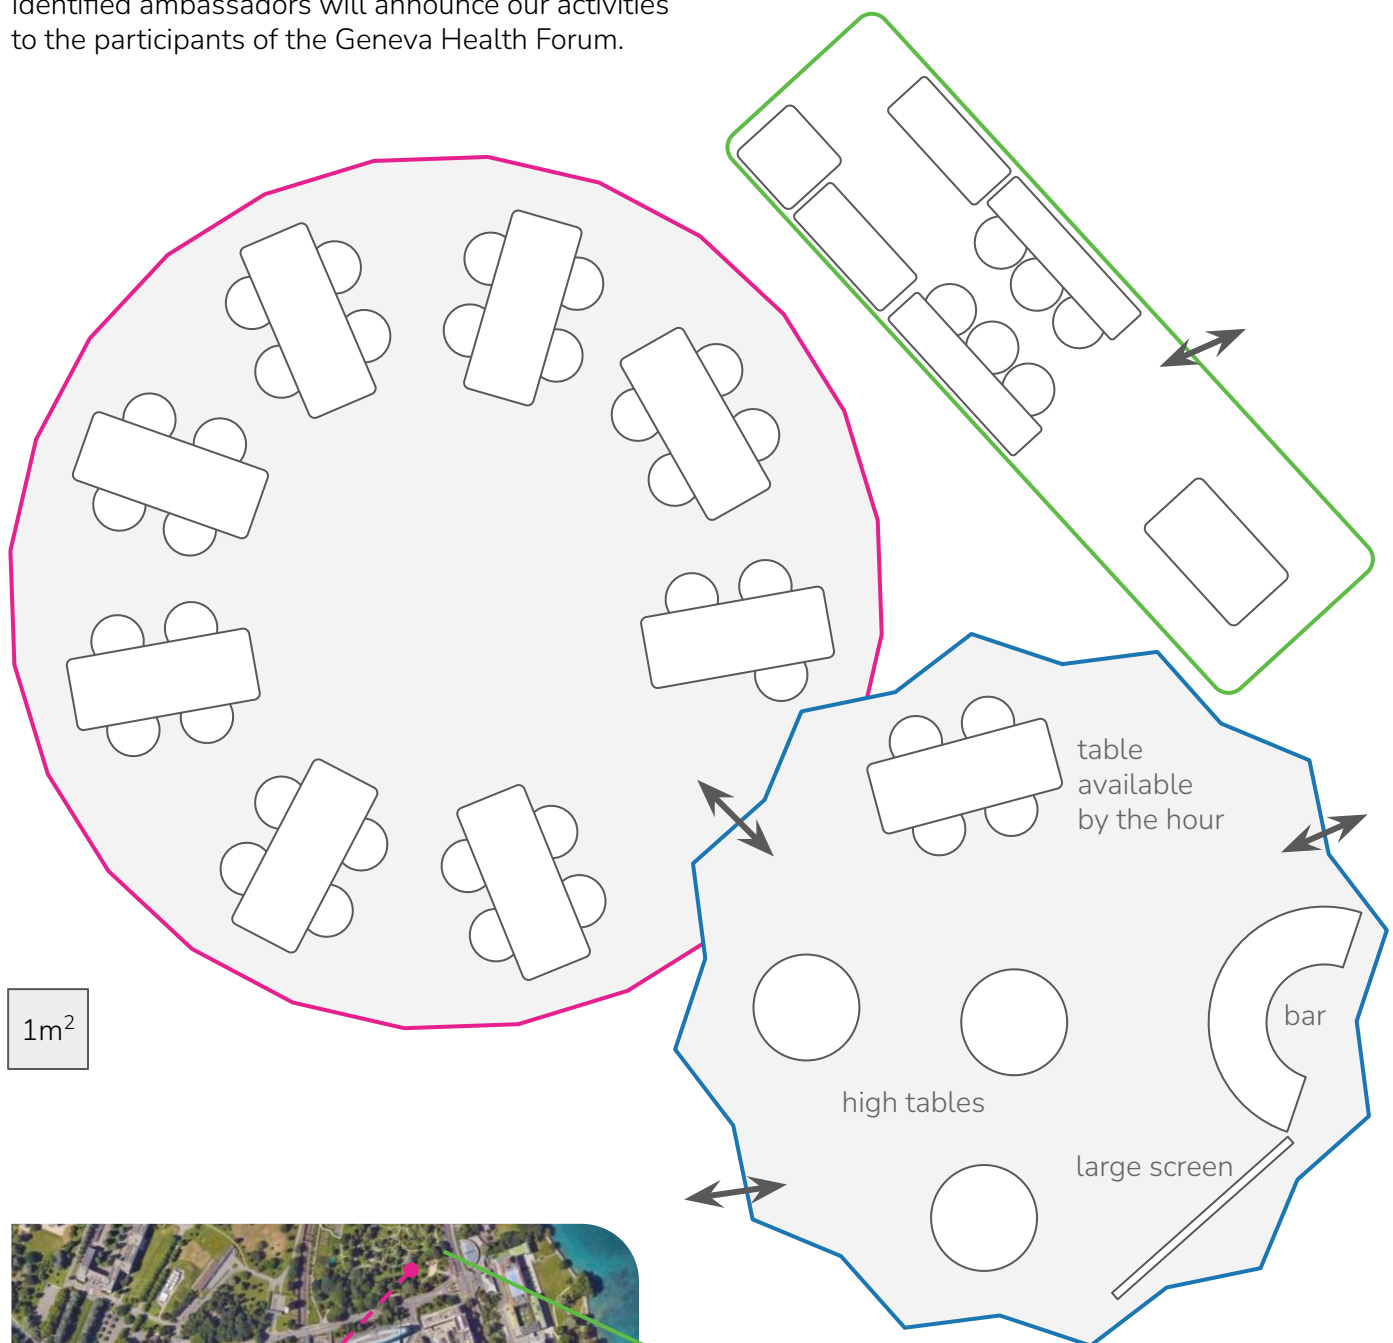

We will adopt a create-as-research methodology ([Chapman and Sawchuk 2015](#)) so that activities are documented (abstract, videos, images, etc) in our [wiki](#), and freely adaptable through [copyleft licenses](#).

The heart of the festival will be three zones, open from 9 am to 5 pm and into the evening:

- **meeting space** open to the public, dedicated to exploring the health commons (sporadic activities)
- **manufacturing lab-bus** open to the public, dedicated to welding and 3D printing (sporadic activities)
- **federating space** dedicated to cooperation between actors engaged in the health commons (activities from 0.5 to 3 days: resource sharing, development of good practices, advocacy, ...)

We will also help a plurality of carers to facilitate one hundred **ephemeral listening activities** across the city over the three days. These activities will be recorded and documented on our wiki.

Identified ambassadors will announce our activities to the participants of the Geneva Health Forum.

- Botanical garden
- Place des Nations
- Geneva-Sécheron station
- Core of the festival (venues considered)
- Geneva Health Forum (CICG)

Creating a shared heritage...

The majority of the resources should be used to build and preserve an information heritage under a legal regime of [copyfair](#) or [copyleft](#), or a normative framework of equivalent effect.

In concrete terms, this means that all activities and projects carried out during the festival will be documented and disseminated in such a way that they can be used, reproduced and enriched freely ([BY-SA license](#)).

In order to do this, project holders will need to ensure that the proposed activities are

- aligned with the three objectives of the festival
- not for profit
- supported by 3+ people involved
- based on active participation
- documented in detail on our wiki according to the [creation-as-research](#) approach

... of citizen knowledge

This pooling process is in line with the [UNESCO recommendation on open science](#) adopted at the end of November 2021 by 193 countries. The principle is that

"More open, transparent, collaborative and inclusive scientific practices, combined with more accessible and verifiable scientific knowledge subject to scrutiny and criticism, improve the efficiency, quality, replicability and impact of the scientific enterprise and hence the reliability of the evidence needed to make sound decisions and policies and to increase trust in science"

The visual below shows the key elements of open science. The festival (pink) thus aims to foster inclusive (blue) co-creation (orange) of diverse open scientific knowledge (green) in health.

Ethics principles

The festival opens a space for the emergence of a culture of health that increases our individual and collective capacities for self-determination and shared governance.

We therefore ensure that the design of the event reduces barriers to knowledge and to the recognition of our own capacities ([individuation process](#), CG Jung).

With epistemic humility ([J. Medina 2013](#)) and a will for empowerment, we opt for an ethic of active participation:

"The simple act of doing no harm [...] overlooks the privileges that allow researchers to observe but choose not to be involved. [Participatory action research encourages] participants to generate benefits for themselves" ([LC Manzo, N Brightbell 2007](#))

Festival dynamics

The festival itself aims to foster the *emergence* of citizen initiatives, methods, open knowledge (bottom-up), in response to *planned* policies such as the [recommendation on open science](#) addressed to public authorities (top down).

Andragogical approach

All festival activities should be in line with ethical principles, and allow for an active contribution from participants over 2/3 of the time.

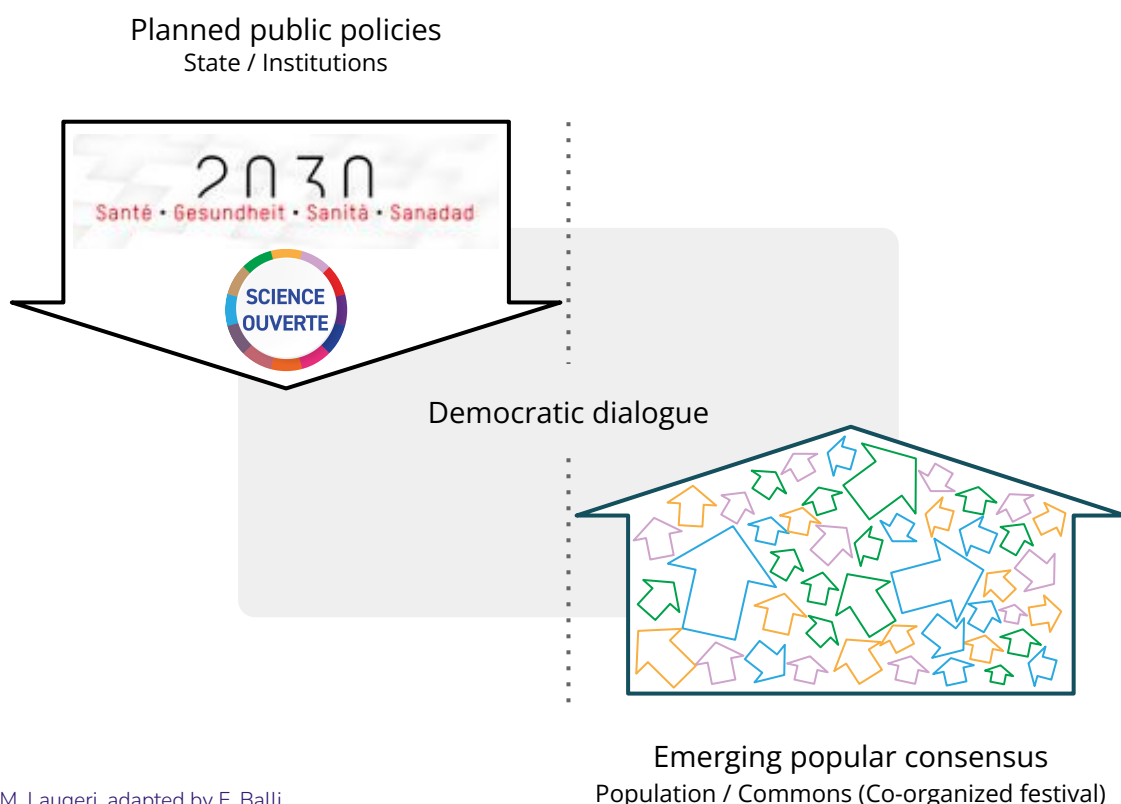

Some compatible methods:

- [dialogic sessions](#) (N. Cornett)
- [education for critical consciousness](#) (P. Freire)
- [experiential learning](#) (D. Kolb)
- [problem-based learning](#) (McMaster)

Dissemination

The dissemination and improvement of the project is based on an iterative ([agile](#)) co-creation practice. Unlike a company whose activity is carried out by a defined number of employees, we value the contributions of all interested people ([crowdsourcing](#)).

By opting for libre/open collaborative tools, we minimise barriers to participation, and encourage interested people to become part of the project, for example by taking the concept to organise a festival in another city. The choice of [MediaWiki](#) to document our actions thus aims to provide a fertile ground for the emergence of an inclusive and plural culture of our health.

Some activities that may take place in French or English, and known or potential partners*.

disease management and prevention	Transdisciplinarity Sharing perspectives on asthma: patients, doctors, psychoanalysts, naturopaths, ... Partner: WHO Lung Alliance	Methodological pluralism List relevant protocols to document, analyse and compare the impact of alternative medicines Partner: Leenaards santeintegra* .
	Regulation Drafting a guidance note on the regulation of medtechs created by liberal communities Partners: Polyvent , CERN	Digital data Reflect on the risks and benefits of quantification / objectification such as patient records, chatbots, watches Partners: Heka , InterHop , HippoAI
health promotion and well-being	Somatic art therapy (J. Hamel) Explore and visually represent various physical sensations experienced and their possible meaning Partner: Ruches d'art	Manufacturing workshop Reproduce and adapt open hand prostheses to the needs of vulnerable people Partners: HackaHealth , E-nable
	Self-hypnosis (M. Erickson) Understanding the principles of self-hypnosis Partner: Institut Erickson Québec* .	Health Commons Sharing good practices to mobilise and enhance a healthy community Partners: Maker's Asylum , OSMS
critical public health	Legislative Theatre (A. Boal) Co-create a legislative proposal in response to emergency laws, with the support of lawyers, parliamentarians Partner: Le caméléon*	Health / my health Encourage collective reflection on the social construction of illness (ableism, care), on evils vs words Partner: CREACC-Diversités
	Patients' rights Bringing together good practice and challenges in the patient-hospital relationship, incl. coping with error Partner: Féd. suisse des patients*	Narrative medicine (R. Charon) Lifting the veil on the suffering of the medical profession, internalised oppression and collective narratives Partner: Aura Association
	Rights to quality air and water Addressing water decolonisation and air preservation using the example of the Italian referendum of 2011 Partner: IUC Turin	Science fiction Imagining a future desired by the greatest number, which values social links rather than technology Partner: Darkmatterlabs*

Team

Festival 'taking care together'

The festival is co-organised by a group of people active in the health commons.

Mathilde Matringe, MDes
community manager, EchOpen
ultrasound scanner for emergency physicians

Clément le Couedic, MEng
Co-founder, Aura Association
patch to better manage epilepsy

Emmanuel Kellner, PhD student
Co-founder, LogAir
pollution mapping

Pascal Carpentier, PhD(c)
Director of Information Systems, DNDi
treatments for rare diseases

The vision and coordination is provided by Breathing Games Association.

Fabio Balli, PhD(c)
President, Breathing Games
co-creation of playful care

It includes people who have a chronic disease, caregivers, researchers, makers...

David-Zacharie Issom, PhD
Patient researcher, HUG
chatbot on sickle cell disease

David Risse, PhD
Researcher, CREACC-Diversities
community health activities

Katerina Serada, LLM
Director, SDG hub
public policy analysis

Charly Pache, MSc
Independent computer scientist
citizen democracy initiatives

The festival is organised under the patronage of the Geneva Health Forum and Open Geneva.

Eric Comte, MD
Director, Geneva Health Forum

Thomas Maillart, PhD
President, Open Geneva

To ensure the festival impact, we integrate a full time equivalent, divided into three roles. The coordination will be done by F. Balli, the other two roles by experienced people.

Roles and distribution over the year	Apr	May	June	July	Aug	Sep	Oct	Nov	Dec	Jan
Coordination (ø 45%)	100	100	100	60	30	30	30	30	30	30
Public relations (ø 30%)	80	100	40	20	20	20	20	20	20	20
Community (ø 25%)	60	80	20	20	20	20	20	20	20	20
Total FTE	240	280	160	100	70	70	70	70	70	70

The preparation activity (from January to March) is funded separately to meet the deadlines and conditions of various funders.

We also plan funds to ensure that those active in the health commons and those organising the ephemeral activities have the resources (time and materials) to do so.

The fund will be distributed transparently, via a cobudget.co type system, to coherent and community supported proposals.

The festival is the result of a cooperation between several Geneva-based non-profit organisations, as well as several communities active in the development of the health commons.

Breathing Games Association - Vision and Coordination

Promoting the playful co-creation of freely reproducible health knowledge (common). 22 research-creation events (Canada, Switzerland, France)
Member: WHO Respiratory Alliance, Open Source Initiative, CAGI, Après GE.
[Website](#) · [Global report 2014-2022](#) · Contact: [Fabio Balli](#), President

Geneva Health Forum - Patronage

The Forum that brings together the key players in global health. A biennial congress that brings together 1800 people from 80 countries (medcare, policy makers, academics, patients). Theme 2022: Global Health and the Environment.
[Website](#) · Contact: [Eric Comte](#), Executive Director

Open Geneva Association - Patronage

Stimulating open innovation in Greater Geneva and international organisations. Annual festival that brings together some 1500 people from the region in 40 hackathons organised by civil society actors.
[Website](#) · [Annual report 2021](#) · Contact: [Thomas Maillart](#), President

Mamajah Association - Infrastructure (under discussion)

Working for a solidarity ecology, for more conviviality and mutual aid between generations. Tree year co-hosts of 'Healing Heart' festival. Place of integration and garden production at Jardins de Loëx. Rental of temporary structures.
[Website](#) · Contact: [Philippe Rohner](#), co-director

Various health commons - Content creation and facilitation

Contents of the GHF Open Village 2020 have been created by a plurality of actors of the health commons: [EchOpen](#), [Aura](#), [LogAir](#), [E-nable](#) (co-hosts), [Open Humans](#), [Learning Planet Institute](#), [Open Source Imaging](#), [Open Source Drug Discovery](#), [Fuga](#), [MindLogger](#), etc.
New organisations will join us for this new festival edition: [Drugs for Neglected Diseases initiative](#), [Hackahealth](#), [Brainhack](#), [Ruches d'art](#), [CREACC-Diversités](#), [Heka.coop](#), [Maker's Asylum](#), [Polyvent](#), [GNU Health](#), etc.

A successful festival will have

Several aspects of the project remain to be defined, such as reporting indicators to be designed with funders and partners.

The potential impact of the festival in terms of participants and projects that will emerge is difficult to assess given the novelty of the format and the field (health commons, open science, ...).

However, we will, over the weeks, validate the interest of the different communities, by quickly launching a call for proposals and by building links with the actors of the civil society in Geneva and in Romandie.

To put the budget in perspective, the state spent 98 billion of public funds to the management of the covid, or an average of 12000.- per capita ([Federal Finance Administration 2021](#)).

Our budget then corresponds to valuing listening and active cooperation between 33 people, who will dedicate their energy to realizing a collective project that any romand will be able to freely use and enrich - such as a visual guide to provide young and elders with tools to preserve their mental health.

We sincerely hope that this project will inspire you, and that we are going to have your support to refine this proposal and make it a success.

For Breathing Games Association

F. Balli

Fabio Balli, President

Former civil society project leader of the [European Union vs Virus](#) hackathon which brought together 20'900 participants over three days. See [interview with Prof. Pittet](#)

We welcome your feedback to adjust this project.

Thank you for your support

Fabio Balli, balli@breathinggames.net

[MediaWiki GHF Open Village](#)

Since 2014, the **Breathing Games** community has been organising events to co-create health games. The goal: making health accessible and participatory through play, a natural way to experiment, socialise, learn.

Today, we have two games translated into twelve languages, and a multiplayer where players can create levels and tell their stories.

Breathing Games is

- 23 co-creation events in health
- 470 contributors across five countries
- 320K of funds received (CIHR, FHF, HE Arc, ...)
- 75 scientific papers
- 23 sets and 8 prototyped breath catchers
- 450K viewers reached

In 2021, we facilitated four workshops in which the content emerged from the participants.

- 24.04, Open Education Day, CH-Open
From discipline(s) to cooperation
- 24.08, Swiss Public Health Conference
Envisioning the future of public health
- 12.10, IASC Commons General Conference
The Great Renaissance: Healing Commons
- 26.11, Geneva hub for Global Digital Health
Health Democracy

We shared our work to various networks (WSIS, FOSDEM, Réseau mère-enfant, Mixed Methods Symposium, Geneva-Tsinghua, GDHub, etc), A highlight was presenting **15 respiratory health commons** at the WHO Global Alliance against Chronic Respiratory Diseases, of which we have been a member since 2018.

For 2022, beyond the festival, we intend to launch a multinational study to assess the games in various contexts, and enrich them on this basis.

This page documents the evolution of the content.

- 1.0 Jan 05 Initial version submitted
- 1.1 Jan 10 Financial part updated to ledger format, Versioning page added, distribution of the team budget carried over from April to January, clarification on team and association in charge parts, various titles revised, explanatory links and partners added, typos corrected
- 1.2 13.01 PPL licence added, Didactics and dissemination page added
